

APC PowerChute Download and Installation

Connect your PC to the stand-by outlet in the APC power strip. Connect both your power and the USB cable that came with the unit. Plug the USB cable into an USB port on the back of your PC. Power up the APC unit. Power up your PC and get to your desktop. The first thing to do is to install the software for the APC unit. Start by inserting the APC CD into your reader. It should auto-start and show you:
